San Diego, CA | cristian@swe.cd | swe.cd | linkedin.com/in/cdom27 | github.com/cdom27

PROFESSIONAL SUMMARY

Frontend-focused software engineer specializing in React, Next.js, TypeScript, and responsive UI. Experienced taking products from UX research and Figma design through production implementation, with additional full-stack experience in PostgreSQL, APIs, and cloud deployment.

TECHNICAL SKILLS

Languages: TypeScript, JavaScript, SQL, HTML, CSS, PHP, Java, Python
Frontend: React, Next.js, Tailwind CSS, Responsive Design, Accessibility
Backend & Data: Node.js, Express.js, PostgreSQL, Drizzle ORM, REST APIs
Cloud & Tools: Vercel, Google Cloud, AWS, Docker, Git, GitHub Actions, Linux
Design: Figma, UI Design, Design Systems, Wireframing, Prototyping

EXPERIENCE

- Mandate Enterprises** Jan. 2026 – Present
Web Designer and Developer San Diego, CA
- Owned the end-to-end design and development of a new production website, translating stakeholder requirements and market research into responsive Figma designs and a custom implementation.
 - Collaborated with the CEO, marketing, publishing, and legal stakeholders to shape information architecture, UX patterns, content requirements, accessibility, and responsive behavior.
 - Established a reusable responsive design system and implemented custom Gutenberg blocks, templates, queries, forms, WooCommerce functionality, SEO, performance, and accessibility improvements.
- Pacific Soul Jazz Festival** June 2026 – Sept. 2026
Web Developer, Contract San Diego, CA
- Developed a production festival website from an external designer's visual system, implementing custom Gutenberg blocks and responsive layouts under a fixed pre-festival deadline.
 - Adapted and refined designs as requirements emerged, completing unfinished flows and resolving mobile, browser, interaction, and content-flow issues discovered during implementation; provided technical support through the festival weekend.

PROJECTS

- Unearth**  | *AI-Powered News Analysis Platform* Next.js, React, TypeScript, PostgreSQL, Drizzle, Claude, Exa
- Rebuilt a full-stack news analysis platform in Next.js, replacing a Vite/React and Express architecture to simplify development and deployment while improving server-rendered SEO and shareable analysis pages.
 - Re-architected article analysis for concurrent AI processing, reducing typical analysis time from 60+ seconds to 27–47 seconds; independent processing states allow completed stages to persist and failed stages to be selectively retried.
 - Designed and implemented the mobile-first interface in Figma and Next.js, including URL-synchronized discovery, filtering, sorting, infinite scrolling, analysis views, and media ratings; current Lighthouse scores include 96 Accessibility, 96 Best Practices, and 100 SEO.
- Open Artwork**  | *Artwork Metadata API* React, Node.js, Express, PostgreSQL, Google Cloud, GitHub Actions
- Built a REST API serving structured public-domain artwork metadata sourced from The Metropolitan Museum of Art's public API and stored in PostgreSQL.
 - Implemented API-key authentication, bcrypt credential hashing, domain-restricted CORS, request validation, and signed Google Cloud Storage URLs; deployed the API on Cloud Run with automated GitHub Actions workflows.

EDUCATION

- San Diego Mesa College** San Diego, CA
Associate of Science in Web Development
- Relevant Coursework: Advanced JavaScript (React, Next.js), Database Management, Cloud Computing, Accessibility, SEO, UX/UI Design, Design Systems, Human-Centered Design
- Western Governors University** Remote
Coursework toward Bachelor of Science in Software Engineering
- Relevant Coursework: Software Engineering, Advanced Database Management, Linux Foundations, Cloud Foundations
