Education

Western Governors University – Coursework toward B.S. in Software Engineering

San Diego Mesa College – A.S. in Web Development

Completed

Projects

Media Analysis Platform [↗](#)

TypeScript, Express, React, PostgreSQL

- Architected scalable full-stack platform handling real-time data stream processing from multiple external sources
- Integrated third-party data sources with local database caching to optimize performance and reduce external API calls
- Implemented CI/CD automation (Docker, GitHub Actions) enabling reliable Cloud Run deployment
- Built interactive React frontend delivering real-time AI-generated summaries and structured analysis results

Artwork Metadata API [↗](#)

TypeScript, Express, React, PostgreSQL

- Designed secure RESTful API with key-based authentication, authorization, and validation
- Built React web client for API documentation and developer onboarding, prioritizing developer experience and system usability
- Implemented testing framework (Vitest, Supertest) and automated CI/CD (GitHub Actions, Docker, GCP) ensuring production reliability and code quality
- Enhanced system reliability with CORS policies, rate limiting, and comprehensive error handling

Personalized Reading Analyzer [↗](#)

TypeScript, Bun, Hono, LibSQL, HTML/CSS

- Designing scalable backend architecture with focus on maintainable data modeling and system design principles
- Capturing functional requirements and planning core user flows to guide iterative development and technical decisions
- Engineering relational data models handling complex business logic (expense tracking, sales, inventory management)

Skills

Frontend Development: React, TypeScript, JavaScript, HTML, CSS, SCSS, TailwindCSS, Vite

Backend Development: Node.js, Express.js, Java, Spring Boot

Databases & Data: PostgreSQL, MySQL, MongoDB, SQL

Cloud & Infrastructure: AWS, Google Cloud Platform, Docker, Cloudflare

DevOps & Version Control: Git, CI/CD (GitHub Actions), Linux, Bash, SSH, Jest, Supertest

Coursework

Full-Stack Web Development: Human Centered Design (UX Research, Accessibility, WCAG standards), Interaction Design (UI/UX design), React, Next.js

Backend & Database Engineering: Spring Boot and REST API development, Advanced Database Management (schema design, query optimization, performance tuning), SQL functions, stored procedures, and triggers

Security & Authentication: JWT-based authentication and authorization systems, secure API design patterns

Cloud Infrastructure & DevOps: GCP (Cloud Run, Cloud Storage) and AWS (EC2, S3), load balancing, CDN configuration, SSL/TLS certificate management, CI/CD automation

Software Engineering Practices: SDLC principles, production code quality standards, Git workflows, Linux system administration

Additional Information

- US Citizen, fully authorized to work in the United States
- Open to relocation
